

PUNCTUREGUARD INTERIOR LINER

PROTECTION THAT HOLDS UP

PunctureGuard's thermoplastic composite construction absorbs impact without cracking or breaking down, helping protect your trailer interior and keep it on the road longer.

 Nothing's going through PunctureGuard. It took all my stress away because now I don't have to worry about something going through my roof.

RAY STEWART
Owner of Outlaw Trucking

RESISTS DAMAGE FROM IMPACT

Thermoplastic composite construction handles repeated forklift and cargo contact without cracking, puncturing, or breaking down.

REDUCES MAINTENANCE AND DOWNTIME

Easier repairs and fewer panel replacements help get trailers back in service faster and reduce long-term maintenance exposure.

LIGHTWEIGHT STRENGTH

High strength-to-weight construction delivers durable impact protection without adding weight or reducing interior space.

BUILT FOR LONG-TERM VALUE

Resists wear and delamination with nearly 3x the peel strength of traditional liners, helping protect equipment condition and resale value.

SEE THE DIFFERENCE IN DURABILITY

Standard liners break down under impact. PunctureGuard is built to take it.

STANDARD LINERS

- Crack, puncture, or delaminate under repeated impact
- Require patches or panel replacement
- Damage builds over time

PUNCTUREGUARD LINER

- Holds up under repeated loading and unloading
- Maintains adhesion and stays in place
- Helps protect interior condition over time

*Up to 3x greater peel strength than traditional liners, helping resist delamination over time.

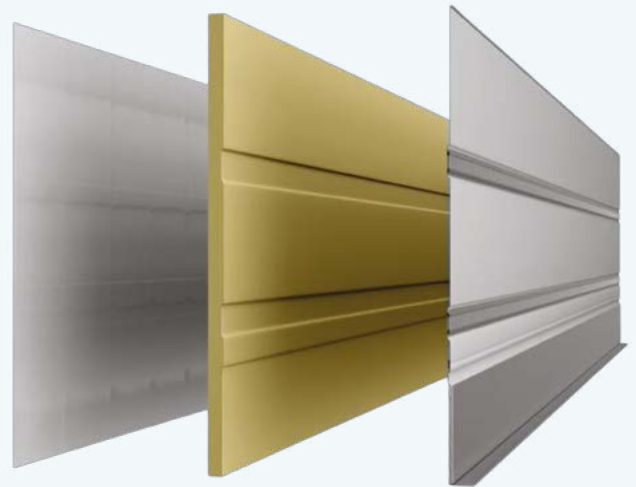

BUILT FOR CLEANLINESS AND PROTECTION

Available with Microban® antimicrobial technology to help support a cleaner trailer interior.

ENGINEERED FOR THE WAY YOU WORK

PunctureGuard combines strength with flexibility, allowing it to absorb impact instead of cracking or breaking down.

- Thermoplastic composite designed to absorb impact
- High strength-to-weight construction enables thinner panels
- Helps resist moisture intrusion and withstand repeated impact and abuse

LOWER MAINTENANCE. MORE UPTIME.

- Reduces interior wall damage from daily loading
- Helps minimize repair frequency and downtime
- Reduces need for panel replacement and patchwork
